Ankara / Türkiye

EDUCATION

Master's Degree in Computer
Animation and Game
Technologies

Hacettepe University
2023 - 2025

Bachelor of Engineering in
Elektrik-Electronic
(GPA: 3.20 / 4.00)

Gazi University
2018 - 2022

SKILLS

- EVM
- React
- Solidity
- JavaScript / TypeScript
- Node.js
- Python
- OpenCV
- Rust
- Unix Operating Systems

LANGUAGES

- TURKISH: NATIVE
- ENGLISH: FLUENT
- RUSSIAN: INTERMEDIATE

ABOUT ME

I graduated from Gazi University with a degree in Electrical and Electronics Engineering in June 2022. With a strong foundation in algorithmic thinking and software knowledge, I initially positioned myself as a candidate for software development roles. However, as I delved deeper into the world of cryptocurrencies and blockchain technology, my career focus shifted.

I am a developer with a software engineering background strengthened by blockchain expertise, capable of seeing the bigger picture across an entire system. While I have hands-on experience in smart contracts, decentralized applications, and blockchain infrastructure, I am actively seeking opportunities to create broader impact in the software field and deliver value across diverse problem domains.

WORK EXPERIENCE

SENIOR SOFTWARE ENGINEER

2022- Ongoing

Proven Bilişim Teknolojileri A.Ş - ANKARA

While contributing to the front-end development of Ambient Finance DEX's Ethereum-based version, I also conducted research on how it can operate across various EVMs. Additionally, I contributed to the development and testing of smart contracts for the Remedi Finance application. Through these experiences, I gained extensive knowledge in EVM, Solidity, blockchain indexing, and smart contract development.

PROJECT GRANT PROGRAM

TÜBİTAK 2209-A - University Students Research Projects Support Program 2021/1

Accuracy of Sports Activities from Video and Camera Images
I made this project using OpenCV and Mediapipe libraries in python coding language, thanks to this project, I improved myself in the field of computer vision.
